Kampa®

Caravan Awnings

2018

There's a Kampa awning for everyone

No one has more experience of lightweight and inflatable awnings than Kampa. The creator of the Kampa range was responsible for the very first lightweight awnings and for many of the designs available in the market today across Europe.

We understand that your awning is an important extension to your caravan and you would like the same quality, design and ease of use that your caravan gives. You want an awning you'd be proud to attach to your caravan and that provides first class accommodation on site, yet remains amongst the easiest of awnings to set up and dismantle whilst being structurally the most secure.

Our newest innovations bring you the very latest enhancements and introduce new models to ensure that Kampa awnings stay ahead of the pack and our bestselling awnings have been further developed to ensure that they offer the best in design, materials and function and that they remain the finest available.

All Kampa lightweight awnings feature sewn in sealing bumper pads to create a seal between awning and caravan; this can be further improved by using the optional rear pole sets and the innovative new Limpet system that attaches the rear of the awning to your caravan. The awnings are made from attractive heavy duty materials - we invite you to 'feel the difference'. All awnings come complete with a draught skirt, fully adjustable pegging points, pegs, instructions and a large compression bag that you can easily pack the awning back into!

2018 sees the introduction of our dynamic Dual-Pitch Roof System across many awnings in our range, giving increased headroom and improved performance. We've also introduced the Ace AIR All-Season, our first inflatable awning designed for longer stays and a real head turner that you won't want to take down and the Rally AIR Pro Grande, a three metre deep awning for those who need more space but with the speed and convenience of Kampa's single point inflation system.

300 400

Ace AIR All-Season

A new seasonal pitch awning or for those on extended stays in sunny climates. The ultimate in style and durability.

Page 12

300 380

Ace AIR Pro

Europe's most sought-after awning now with the Dual Pitch Roof System. Available in 300, 400 and 500 sizes.

Page 16

390

Frontier AIR Pro

Our flagship model in its latest format. No other inflatable awning has ever offered this much space and now available in 400 and 300 sizes. SPACE, THE FINAL FRONTIER!

Page 10

Classic AIR Expert

For those who hanker after traditional styling but want the ease of the Kampa one-point inflation system. Available in 300 and 380 sizes.

Page 14

Rally AIR Pro Grande

Building on the success of our famous Rally models but with a huge three metre depth.

Page 18

Rally AIR Pro

Europe's best-selling inflatable awnings. Now with the latest Dual-Pitch Roof System, there's a size to suit all caravans and needs. Available in 200, 260, 330 and 390 sizes.

Page 22

Rally AIR Pro Plus

All the great features of our bestselling Rally AIR Pro but with a large built in side extension. Perfect for storage, sleeping, living and as a wet weather entrance. Available in a 390 and a new 260 size.

Page 20

Fiesta AIR Pro

Elegant style with the option of a zip on canopy and an annexe on either side, all in our fantastic Pro fabric. Available in 280, 350 and 420 sizes.

Page 24

Pop AIR Pro

Essential extra space for pop-up caravans – the Pop AIR is the first purpose-made inflatable awning. Available to fit the Eriba Touring range but also suits other pop-up caravans.

Page 26

Ace Pro

The ultimate in lightweight poled awning design. The Ace is a stylish addition to your caravan and provides loads of fantastic living space. Available in a 400 size.

Page 28

Revo Zip

A speedy roll-out awning with the option to quickly zip on a Privacy Room.

Page 34

Rally

The famous Rally in its updated format is now even better value than ever. Available in 200, 260, 330 and 390 sizes.

Page 32

Sunshine AIR Pro

A simple product made even simpler with the inclusion of our inflatable technology.

Page 33

Rally Pro

An incredibly high specification awning. Available in 200, 260, 330 and 390 sizes.

Page 30

Accessories & Options

Kampa awnings can be customised to suit your own needs. We offer a comprehensive range of optional equipment that can be ordered with your awning.

Choose your awning and size

Kampa AirFrame Awnings

The future in your hands

After years of development and having sold tens of thousands across Europe, Kampa AIR awnings have revolutionised caravanning. Gone are the traditional metal or fibreglass poles, replaced by strong, high pressure inflatable AirFrame poles. No more struggling with the awning frame and trying to find the correct pole, the AirFrame is already attached to the awning for simple, one step set up.

So how does it work?

It's simple - traditional poles have been replaced with an inflatable AirFrame that is always attached to the awning. The individual poles are linked together so that you can pump at just one single point and inflate the entire awning. The rigid AirFrame creates an exceptionally strong awning, probably stronger than a steel frame. It can be inflated using the supplied high volume manual pump or, for the ultimate in ease, with the optional Gale electric pump. A Rally Air 260 can be pumped up in less than 60 seconds using the manual pump.

What's the set up procedure?

It's never been easier, just follow these simple steps:

- 1) Thread the awning onto the awning rail of your caravan. Kampa AIR awnings are lightweight making it much easier than a conventional awning. All Kampa AIR awnings have zip out panels that can be removed to reduce the weight still further.
- 2) Peg down the four corners of the awning.
- 3) Attach the pump to the inflation point and pump until inflated.
- 4) Peg down the intermediate pegging points and guy lines.

That's it! The easiest awnings ever.

Other advantages

- As well as being the easiest awnings to set up, they're also the easiest to take down.
- Kampa AIR awnings are lighter than awnings with conventional poles.
- A Rally Air 390 is up to 27% lighter than an equivalent awning which reduces your payload.
- With no metal or fibreglass poles there's nothing to damage your caravan. Soft AirPoles rest against your van with no other attachment.
- The AirFrame is always attached - you're never going to forget or lose your poles.
- Whilst the AirFrame is very rigid it does flex in the wind, meaning that you'll never break or bend a pole.
- The AIR awnings are made with class leading materials and are produced by skilled craftsmen.

The Kampa AirFrame Advantage

The AirFrame is incredibly durable and under normal conditions will not fail. Each AirPole is made of a strong TPU inflation tube that is zipped into a tough reinforced PE cover. This is then zipped into a heavy duty polyester sleeve in the awning. The inflation tubes are well protected and need no maintenance. Ideal operating pressure is between 9 and 11 psi and the poles are tested to 22 psi, a pressure that is not possible to reach using either the supplied pump or the optional Gale electric pump. This is substantially higher than other inflatable awnings and ensures that Kampa AIR awnings are the strongest and most stable available. They are not affected by extremes of temperature - they have been tested in arctic and tropical climates and are available in Iceland and Australia. Should one of the AirPoles be damaged, each AirPole can be isolated from neighbouring poles using the isolation valves. A repair to the AirPole or replacement can then be made in a matter of minutes. Damage to a single AirPole may not make the awning unusable.

Why buy a Kampa AIR awning?

Since we launched our first AIR awnings in 2013, tens of thousands of caravanners have joined the Kampa revolution and no longer fear setting up their awning. It's not surprising that other brands want to imitate our success. We've seen an influx of "inflatable" product enter the market, often copying our designs. So, what do these new contenders bring to inflatable awning design? The answer is nothing. How have they improved on design and function? The answer is they haven't.

The foremost reason for buying an inflatable awning is easy set up. No awning is quicker or easier than a Kampa AIR. All Kampa AIR awnings inflate from just one external inflation point. That's one inflation point from where the whole awning is inflated including all supporting AirPoles and beams - there are no additional poles to inflate and insert - the whole awning inflates through the one valve. On other brands each of the poles are separate and need to be pumped up individually. Can you imagine having to inflate up to ten individual poles? Frankly it's quicker and easier to set up one of our conventional poled awnings.

Kampa AIR awnings have quick release deflation valves - there's no need to unscrew the inflation valve and this deflates the whole awning. How long will it take to undo and deflate ten individual poles?

Before purchasing an inflatable awning insist on a full demonstration - from deflated to fully inflated making sure that all poles are pumped up. Then ask for it to be fully deflated!

There are many other reasons to purchase a Kampa AIR awning:

- Kampa are the pioneers and world leaders in inflatable awning technology. We're the market leaders and have extensive knowledge and experience.
- The people behind Kampa awnings have over forty years of continuous expertise in awnings and awning design.
- Kampa AIR awnings have been fully tested. This ensures good design with adequate run-off whilst at the same time ensuring internal clearance for the caravan door. All of our designs spend hours in a rain room ensuring that a Kampa AIR awning will not let you down.
- Kampa has the widest range available. For 2018 we have twenty-five different caravan AIR awnings available to suit your requirements and budget.
- Kampa AIR awnings can be customised with a range of optional equipment including different types of carpet, roof linings and our fantastic SabreLink lighting system.

Whilst tested to 22psi, the AirFrame system best functions when inflated to between 9 and 11psi and is suitable for both hot and cold climates as well as extreme changes in temperature.

As the AirFrame system can cope with extreme changes in temperature, Kampa awnings do not use 'pressure relief valves' as these would unnecessarily expel air from the awning, reducing the stability and requiring more air to be added.

The below chart displays how the air pressure in the AirFrame will vary in different temperatures:

AirPole Pressure	Temperature
11.7 psi	40°C / 104°F
10.8 psi	30°C / 86°F
10.0 psi	20°C / 68°F
9.2 psi	10°C / 50°F
8.3 psi	0°C / 32°F
7.5 psi	-10°C / 14°F
6.6 psi	-20°C / -4°F
5.8 psi	-30°C / -22°F
4.9 psi	-40°C / -40°F

An awning inflated to 10.0 psi at 20°C (68°F) will only increase to 11.7 psi at 40°C (104°F), well within the awnings tested maximum air pressure of 22 psi.

More reasons to buy a Kampa awning

Kampa awnings have upright front wall panels allowing full use of the interior space. The front headroom is exceptional allowing an unobstructed view out. Kampa awnings have a generous depth.

Large, Crystal Clear windows ensure a great view out. All windows come with internal blinds or curtains, on easy-slide track for privacy.

Zip-out panels reduce the weight you have to pull through the awning rail (minimum awning weight).

Kampa awnings come in oversized carry bags making them easier to repack.

All Kampa awnings come with fixings ready to accept our optional Storm Tie Down system.

The easiest set up. Whether it's inflatable or poled, Kampa awnings are the easiest to set up. The whole operation can be achieved in minutes, with a minimum of fuss.

Our awnings have strong mudwalls with integral eyelets to keep out draughts.

Kampa zips are heavy duty and won't let you down.

All Kampa AIR awnings come with our Downdraught pump. The pump is taller so you don't need to bend as far and, because it only works on the down stroke, it requires a lot less effort – you'll certainly notice the difference. The pump has more comfortable hand grips and a built in pressure gauge, so you'll know when you've reached the correct pressure.

Kampa awnings can be customised with the widest range of optional equipment including organisers, mesh panels and roof linings.

Our Materials

New and improved materials for 2018

Weathershield™ Four-Season

Tested in the sunniest parts of Australia and the wettest places in Europe to make sure it's able to cope with extended exposure to the elements. The material is breathable and extremely durable.

Weathershield™ 4-SEASON

Weathershield™ EXPERT

Our latest Expert materials are used on the new Classic models. The roof and walls are breathable, ensuring a comfortable climate inside the awning with less risk of condensation. The walls have a great textured feel and are extremely waterproof and durable.

Weathershield™ Expert

Weathershield™ Pro

Our iconic fabric that we use extensively throughout the range has proved itself time and time again. We've made improvements to the UV protection and the coatings to make sure that Weathershield™ Pro continues to be market leading.

Weathershield™ PRO

Weathershield™

Weathershield™

Durable and extremely weather resistant, this material's been protecting caravanners since 2008. We've improved the coatings to make it even better.

Dual Pitch™ ROOF SYSTEM

Dual-Pitch

NEW!

Dual
Pitch™
ROOF SYSTEM

Dual-Pitch Roof System

**Another brand new
innovation from Kampa.**

Awnings with Kampa's Dual-Pitch Roof System have much better interior headroom, making Kampa awnings more spacious and useable than any other inflatable awning on the market.

The taut Dual-Pitch roof line is also designed to perform. The pole structure of each roof has been carefully constructed to ensure that wind is deflected and rain water is shed efficiently, helping prevent puddling on the roof and thereby enhancing the performance.

Dual
Pitch™
ROOF SYSTEM

Kampa® PRO FRONTIER AIR

Frontier AIR Pro 400

- space and elegance

The ultimate inflatable awning and our flagship model freshly updated for the 2018 season. If it's space that you require then the Frontier will meet all your requirements as it's one of the largest awnings available. The Frontier 400 is eight metres wide yet it only needs a caravan with a horizontal awning rail of just over four metres. The Frontier 300 is seven metres wide yet it only needs a horizontal rail of just over three metres. The maximum depth of both sizes is an impressive three metres.

As with all Kampa AIR awnings, the Frontier is inflated through a single inflation point and the front panels can be removed to make it easier to thread the awning onto the caravan. Once set up you can revel in the large open inside space with loads of room for furniture and all your other caravanning paraphernalia.

All the centre panels can be zipped down, veranda style, rolled to the side as a doorway or completely removed. You can zip in mesh panels for those hot days when you want to keep the insects out and for 2018 these can remain in situ behind the front panels. Each of the end extensions has its own front door and a window in the rear panel so, if the extension covers your caravan window, you can still see out into the awning. The rear panels also have zipped access for any lockers behind them.

Windows in both rear panels allow a clear view out of the caravan.

Kampa® ALL SEASON ACE AIR 400

- an awning for all seasons

If you want a seasonal pitch awning that is just as easy to set up as our other inflatable awnings then this is the awning for you. The All-Season has been designed to be set up for extended periods of time and every component has been selected to cope with extremes of weather. The Four Season fabric has been tested in the hottest, sunniest parts of Australia to ensure that it's suitable for use in this awning. The All-Season features our latest Dual-Pitch Roof System and double mud wall to ensure that it will stand up to the worst of the weather.

This awning has all the features of our Ace awnings but also comes with an protective canopy, exterior roll back blinds on all windows, a washable base panel and a storm tie down kit as standard.

Kampa® EXPERT CLASSIC AIR

- classic good looks, so easy to set up

The inflatable awning that doesn't look like an inflatable awning! Don't be deceived by its traditional good looks, this awning is inflated like any of our other AIR awnings from just one inflation point. This makes it quick and easy to set up yet it could be mistaken for classic Scandinavian design. The Classic AIR showcases our latest Expert Weathershield™ materials that offer superb protection but are also breathable. The front and side panels can be removed to make set up easier and, if the side door is obstructed by the caravan step, the side panels are interchangeable - you can swap them around so that the side doors are at the front of the awning. The Classic AIR has a small front canopy that is supported by a lightweight aluminium frame that takes seconds to set up. The awning can be customised to suit your needs with the usual Kampa options such as furniture, roof lining, organiser, tall annexe and our exciting Conservatory, an ideal place to settle down with a book on those days when it's not warm enough to sit outside.

Kampa[®] PRO ACE AIR

- perfect from all angles

Europe's most sought-after awning. The 2018 version sees some major improvements that make it the best Ace AIR ever. The Ace AIR offers such style whilst still being completely functional - you're certain to be the envy of the caravan park. Everything we know about awning design is incorporated within this model, that's forty years of continual awning design. The shaped front panels not only look good but provide extra interior space with a depth of 300 cm. Moving inside the awning, the view out is spectacular, with large panoramic windows and skylights providing plenty of light during the day and a view of the stars at night.

The 2018 version features our new Dual-Pitch Roof System and one side panel now has a large mesh window panel that can be opened in hot weather.

If weight is an issue the wall panels can be removed so that it's only necessary to feed the roof through the awning rail and then simply zip the panels back in.

The Ace AIR is available in 300, 400 and 500 sizes and these can be complemented by the spectacular Sun Wing that is available for each of the sizes.

RALLY AIR PLUS

- when you need more room

All the features and functions of our Rally AIR Pro with a bit more space. The side extension is particularly useful - it can be used as a wet weather entrance or somewhere to kick off your shoes. Alternatively, for storage as somewhere to park the bikes or house outdoor furniture or simply for extra living space when you're entertaining. It could also be used for extra sleeping accommodation, with the optional inner tent, when you've got guests. You can choose how you use this versatile space. The awning can be left divided or you can remove the side panel to open it up as one large area. New for 2018 are the large mesh window panels that can be opened in warm weather.

The Plus has all our latest features including the ability to accept mesh front panels and our Limpet System. The extension is inflated at the same time as the rest of the awning through the same inflation point making it as easy to set up as the rest of our awnings. If the extension covers a caravan window you can open a flap on the rear panel to reveal a window, allowing unimpeded access into the awning from the caravan and there's zipped access to any lockers that may be behind the extension. The Rally AIR Plus is available in 390 and a new 260 size and can be ordered in left and right versions (looking at the front of the awning).

Rally AIR Pro 390

- updated version of our bestselling favourite

The Rally AIR Pro is quite simply the bestselling inflatable awning in the world. This updated Series 5 version brings even more features and makes sure that the Rally AIR Pro remains market leading. This is a full function awning; we've thought of everything. Interchangeable zip-out side panels allow the fitting of an annexe or conservatory and the reversal of the side doors – from the back of the awning, to the front. For 2018 we've completely redesigned the Rally Air that now has the Dual-Pitch roof system and a large mesh window panel in the right-hand side panel. All the Rally AIR Pros can now be fitted with optional front mesh panels, giving loads of ventilation whilst keeping the bugs out. The Rally AIR Pro models are ready to accept our Limpet System – an ingenious method of attaching the side walls to the caravan. Available in 200, 260, 330 and 390 sizes.

The Rally AIR Pro uses our fantastic Weathershield[®] Pro material for excellent weatherproofing and long life but is still light enough for easy set up and handling.

Kampa[®] PRO

FIESTA AIR

- the most versatile inflatable awning

If you're looking for an awning that will adapt with your needs, then look no further than the Fiesta AIR Pro. This stunning looking awning not only offers flexibility on the way the front and side panels are used but can also be fitted with exciting options such as the front sun canopy and an annexe. As its name suggests, the Fiesta AIR Pro uses our exclusive Weathershield™ Pro material in combination with our patented inflation system to make one of the most desirable awnings on the market - the Fiesta AIR Pro is one of our bestselling awnings. Available in a range of useful sizes - 280, 350 and 420, there's bound to be a model that suits your needs and caravan.

Both the front and side panels can be completely zipped out and the side panels can be replaced with the optional annexe. As with all Kampa awnings, set up is very simple and exceptionally quick, as the Fiesta features the same one-point inflation system as the rest of our inflatable awnings. Both side panels are interchangeable, and one has a large mesh ventilation panel. The optional canopy simply zips onto the front of the awning and is supported with strong aluminium poles. There is a canopy to suit each size.

Kampa[®] PRO POP AIR

- for Eriba Touring and other pop-up caravans

The inflatable awning solution for your Eriba caravan. Now you can have a Kampa inflatable awning that is easy to set up and gives you valuable extra living space. There are four sizes specifically designed fit the different sized Eriba Touring caravans but these will also fit other pop-up caravans depending upon their height and length. The Pop awnings have a clever dual height system that means that they will fit pre and post 2010 models (260 Puck model only pre 2010).

The Pop design is based on our Fiesta AIR design and it shares many of the features including a zip-out front panel. The rear of the awning has an extra inflatable tube that raises the centre height making it a full height awning with plenty of headroom and a light airy feel. The Pop has plenty of windows, for a great view out, and closable mesh panels provide ventilation when needed.

Due to the design of Eriba caravans and the fitment of the awning, we recommend the use of an Eriba Weather Protection Strip. This simply clips to the caravan gutter and prevents rain running into the gully between the caravan and awning. It is available as optional equipment.

Available in four sizes.

Pop 365 AIR Pro

Pop 260 AIR Pro

Pop 340 AIR Pro shown with optional Continental Cushioned Carpet

Optional Eriba Weather Protection Strip prevents rain running into the gully between the caravan and awning.

Height adjustable pegging to suit different model years.

Why buy a framed Kampa awning?

Although they are becoming increasingly popular, we understand that not everyone wants an inflatable awning. Kampa pioneered premium quality poled awnings and they quickly became the bestselling awnings of their type.

There's a Kampa poled awning to suit most budgets from the original Rally through to the Ace - would you really want anything less on your caravan? No other lightweight awnings are so advanced in their design and quality or as easy to set up as a Kampa.

These conventionally framed awnings are unique in offering adjustable front legs, these are absolutely essential to ensure a good fit between your awning and caravan. The diagram explains why your awning should have adjustable legs.

Awning without adjustable legs

When the ground slopes upwards away from the caravan, the front legs are pushed upwards pulling the back of the awning away from the caravan.

When the ground slopes downwards away from the caravan, the front legs drop making the back of the awning too close to the caravan.

The advantage of adjustable legs on the Rally

When the ground slopes upwards away from the caravan, the legs can be made shorter maintaining a close fit against the caravan.

When the ground slopes downwards away from the caravan, the legs can be made longer maintaining a close fit against the caravan.

Kampa[®] PRO ACE

- a new twist

As well as inflatable technology, Kampa are at the forefront of conventional awning design. The Ace showcases all that's best in lightweight awning design and function. The Ace, like all Rally awnings, is easy to set up - it is no more difficult than our smaller models. The awning is 400 cm wide and a very generous 300 cm deep - big enough for an extended holiday and an ideal replacement for a full awning. All five panels can be zipped out and an optional annexe can be zipped into either side.

The view out is amazing, through the skylights in the roof and the large panoramic windows. Unusually, for a lightweight awning, the Ace comes with conventional curtains that gives an impression of sheer elegance. The Ace is designed to accept all our latest options including a roof lining and the accessories that attach to the fitted AccessoryTrack™. To keep the payload down the frame is manufactured in aluminium.

Available in 400 size

Kampa® PRO RALLY

- for the most discerning

For the discerning caravanner who demands the finest lightweight awnings we have combined the superlative features of classic and lightweight awnings to produce a hybrid that gives you the best of both worlds. The awning is produced in extra high quality Weathershield™ Pro material that looks and feels like traditional material but has all the benefits of modern technology.

The Rally Pro remains exceptionally easy to set up using steel poles throughout for extra strength and retains the unique adjustable front legs to ensure a perfect pitch every time. We've made improvements to the latest models to ensure that the Rally Pro remains the best lightweight awning available and the Rally Pro is available in a striking Grey/ Charcoal colour combination.

The look is complemented by the curtains, for both the front and side windows, that slide on easy run track. There's a Rally Pro to suit all caravans and purposes, whether it's the 200 for a quick weekend away or a 390 for an extended holiday. Whichever size you choose you can be sure that it's quick and easy to set up.

The zip out side panels offer even more flexibility and also allows an optional annexe to be zipped into either side - or both sides. The annexe is also simple to set up and comes complete with an inner tent. It makes excellent additional accommodation or can be used as extra storage.

The Rally Pro can be customised with our range of optional equipment which includes the organiser and hanging rail that can be attached to our AccessoryTrack™ fitted to all Rally Pro awnings.

Kampa®

RALLY

- the original
and still the best

The awning that started it all and spawned all other Kampa awnings. Its DNA can be seen throughout the range. This is the latest format, available in four very useful sizes. The compact 200, so useful for weekend and overnight stays but still large enough for a table and a couple of chairs. The 260 can fulfil the needs of the weekend or touring caravanner but could equally suffice for longer holidays. The 330 with its large panoramic windows that is no more difficult to set up than its smaller siblings. And the full size 390 that can house a family and can be used as a replacement for the traditional awning without the hassle. Whatever the size, they're all incredibly quick and easy to set up with the majority of the work done from the outside of the awning. As with all Kampa awnings, the Rally is made from premium materials that will not let you down and looks great on your caravan. It's as quick to dismantle and packs down into an oversized carry bag with compression straps.

Available in 200, 260, 330 and 390 sizes

Kampa® PRO SUNSHINE AIR

- here comes the sun...

A simple product made even simpler and safer with the inclusion of our inflatable technology. Sunshades are notorious for catching the wind and, in the worst case scenario metal frames can damage the caravan. There's no such problems with the Kampa Sunshine, the soft poles inflate in seconds and will never damage the caravan. After the quick set up the sunshade gives a generous sheltered area in which to relax.

REVO ZIP

roll-out awnings

- roll-out in style...

The Revo Zip offers an alternative solution to our other caravan awnings. The Revo Zip can be left permanently attached to your caravan or motorhome, freeing up storage space and speeding up set up. Once fitted, just open the bag zip, roll the awning out and deploy the two front legs and the two rafters – it's as simple as that. Take down is just as quick. If you're looking for more than just shade, the Revo Zip can be quickly fitted with a Privacy Room that provides comfortable accommodation away from the elements.

SabreLink™ - the effective lighting solution for your awning

An exciting accessory for your awning, the SabreLink™ lighting system ensures you're never in the dark. The system allows you to link up to three lights together - that's 450 LED's. Each of our AirFrame awnings is SabreLink™ ready and can accept lights on the front AirPoles and also the centre poles. An Ace AIR Pro 400, for example, could have three lights along the front and another three in the centre. Each system is controlled using a remote control that allows you to switch the lights on and off and also dim and brighten them. In our poled awnings the lights can be hung from the horizontal poles using the 'S' hooks provided.

SabreLink™ Specifications

- Available as Starter and Add-On kits
- Up to three lights can link together
- Operated using a remote control
- Brightness can be adjusted
- Velcro tabs on all Kampa AIR awnings from 2016 for easy fitting
- Can be hung in other awnings using the hooks supplied
- 150 super bright LED bulbs - never need replacing
- 5 metre cable (Starter kit)
- 1.2 metre long
- Complete with mains adaptor in Starter Kit (Euro version available)
- S-hooks included for other awnings and tents
- Optional 12V adapter available (LG1039)

Suitable for all
